LIVE PLAN PREVIEW

AI CFO for creators

DRAFTING

VALUE PROPOSITION

Sharper positioning for a small-business finance copilot that reads bank feeds and explains them in plain English.

TARGET SEGMENT

Freelancers and micro-agencies with inconsistent monthly cash flow and no in-house finance team.

LAUNCH PATH

Start in niche creator communities, then expand through accountant referral partnerships.

• THE PROPOSAL PROBLEM

Founders have ideas. Writing the plan is where they stall.

0 1

Slow & expert-only

A solid business proposal still takes weeks of drafting and feedback, and assumes the founder already speaks the language of investors, markets, and unit economics.

0 2

Ideas without structure

Students and first-time founders have strong instincts but struggle to organize them into the sections an investor or advisor actually expects to see.

0 3

Tools miss the middle

Existing options are either generic templates with no intelligence, or open-ended chat that produces unstructured text you still have to clean up by hand.

• SOLUTION OVERVIEW

An AI workspace that writes the plan with you.

A guided web app that takes a rough idea and returns a clean, structured business proposal — ready to read, edit, export, and improve through feedback.

LLM-driven generation

Structured output

Every plan ships as named sections — idea, market, strategy, monetization — not a raw wall of text.

Calm, focused UI

A single-screen workspace handles input, drafting state, the readable output, and the path back to history.

Export & feedback loop

One-click PDF / DOCX export, plus a feedback score that informs the next regeneration round.

• KEY FEATURES

Six capabilities, one workspace.

F · 01

AI-generated business plans

An idea in — a complete, multi-section draft out, ready to review, edit, and share.

F · 02

Structured sections

Idea, market, strategy, monetization, and pitch — each a first-class block, not a paragraph.

F · 03

Auth & saved history

JWT login keeps each user's plan history private and retrievable across sessions.

F · 04

PDF & DOCX export

Backend rendering ships clean, presentable files — no extra formatting required from the user.

F · 05

Feedback loop

A scoring step records what worked and feeds the next pass of generation, so quality compounds.

F · 06

Guided / chatbot input

A conversational entry path turns prompting into a question flow, so non-experts can still produce dense input.

Two services, one clean contract.

FRONTEND · CLIENT

React + TS

Vite · TypeScript · Tailwind. Renders the workspace, handles auth state, and talks to the API.

UI

Pages

Business Generator · Chatbot · Auth · History

CMP

Components

Hero, Form, Output cards, Plan viewer

NET

API layer

Typed fetch utilities, auth header, error UX

SYS

Routing & state

React Router, local storage, motion polish

BACKEND · SERVICE

FastAPI

Python · Pydantic · Uvicorn. Owns generation, auth, storage, and export.

LLM

Generation engine

SEC

Auth

JWT login & signup, bcrypt hashing

API

Routers

generate · plans · export · feedback · health

DB

Storage

Local JSON by default · MongoDB-ready

Six models behind one prompt chain.

The backend talks to **Hugging Face’s inference router** with a single token, then forwards each request to the right open-weights provider — so we can swap models without touching the app.

ROUTING

router.huggingface.co
→ together / chat/completions
→ hyperbolic / chat/completions

WHY A ROUTER

One auth, many backends. Add or retire a model by editing a dictionary — not by re-plumbing the request layer.

M · 01

DEFAULT

Llama 3.3 70B Instruct Turbo

meta-llama

General-purpose generation across all proposal sections.

→ TOGETHER

M · 02

DeepSeek V3

deepseek-ai

Strong structured reasoning — great for market and revenue sections.

→ TOGETHER

M · 03

DeepSeek R1

deepseek-ai

Reasoning-heavy variant for the validation and refinement step.

→ TOGETHER

M · 04

DeepSeek V3-0324

deepseek-ai

Same family, alternate routing — keeps a backup path live.

→ HYPERBOLIC

M · 05

Kimi K2.5

moonshotai

Long-context model for digesting large user inputs in one shot.

→ TOGETHER

M · 06

Qwen 2.5 7B Instruct Turbo

Qwen

Lightweight, fast option for quick iteration and demo runs.

→ TOGETHER

Gemini 2.5 Flash · google-generativeai

Alternate provider path — used when only GEMINI_API_KEY is configured. Local structured fallback covers offline demos.

ALT PROVIDER

• WORKFLOW

From idea to exported draft — in six steps.

USER USER → UI UI → API LLM → UI UI → FILE USER → LLM

LOOP · THE FEEDBACK STEP IS WHAT MAKES DRAFT N+1 BETTER

• WHAT MAKES US UNIQUE

Not a template. Not a chatbot.

01	End-to-end generation	The whole proposal is generated and assembled — not a fill-in template that hides the hard part.	→
02	Generation + feedback + export, together	Most tools stop at the draft. We close the loop with a feedback score and one-click ship-ready files.	→
03	Structure over raw text	Output is named sections you can edit and rearrange — not a wall of LLM prose to clean up.	→
04	UI that respects the user	Calm typography, predictable states, one workspace. Designed to reduce blank-page anxiety, not add to it.	→
05	Scalable architecture	Frontend and backend are cleanly separated, with swappable storage and an LLM provider you can replace without touching the UI.	→

• FUTURE IMPROVEMENTS

From class capstone to real tool.

AI personalization

Per-user tone, prior plan style, and rejection signals shape future drafts.

ROADMAP · 01

Industry templates

Pre-tuned scaffolds for SaaS, marketplaces, hardware, services, and non-profits.

ROADMAP · 02

Collaboration

Shared workspaces, comment threads, and per-section ownership for teams.

ROADMAP · 03

Refined UI/UX

Inline edit, diff view between drafts, and a calmer onboarding for first-time users.

ROADMAP · 04

Real-world integrations

Pitch-deck export, Notion/Google Docs sync, and pipes to funding-platform forms.

ROADMAP · 05

● LIVE DEMO

Let's see it run.

We'll walk through sign-in, drop in a real startup idea, generate the proposal, and export it — live.

● SYSTEM READY

LOCALHOST · :5173 ↔ :8000

THANK YOU · QUESTIONS WELCOME

```
● ● ● AI-BUSINESS-PROPOSAL · ZSH

$ uvicorn app.main:app --port 8000
✓ backend listening on 127.0.0.1:8000
✓ storage mode: local
$ npm run dev --workspace frontend
✓ vite ready on http://localhost:5173
> generate("AI CFO for creators")
```
